### Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with calypso dryer manual . To get started finding calypso dryer manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

## Book Descriptions:

# calypso dryer manual

A grounded electrical outlet located within 4 ft. 1.2 m of where the power cord is attached to the back of the washer. See "Electrical Requirements.". Do not reinstall into the washer, the styrofoam that contains the supplied parts. Select the drain hose installation method you need. See "Alternate Parts You May Need." Fig. Gently lower the washer to the floor. Prop up the front of the washer about 4 in. 10.2 cm with a wood block or similar object. The block needs to support the weight of the washer. Screw on coupling by hand. Using the pliers, tighten the coupling an additional two-thirds turn. NOTE Do not overtighten. Damage to the valve may result. 1. Cold water inlet valve blue 2. High Efficiency detergents are formulated to control sudsing which may occur with use of regular detergents. CONTROL PANEL Extra Heavy Normal Normal Options Light Refresh CYCLE DESCRIPTIONS. Water fill temperatures can be either HOT hot water valve only, WARM both the hot and cold water valves or COLD cold water valve only. The WATER TEMP can be changed at any time during the wash cycle. Pressing the END OF CYCLE SIGNAL keypad toggles between these options by lighting one of the LEDs and beeping the corresponding end of cycle signal at the volume level selected. The Machine Controller interfaces with the Motor Controller to operate the Drive motor and Pump motor through their various functions during the cycle. The Machine Controller also directly operates the water fill and dispenser solenoids, interprets the thermistor readings, lid switch condition, as well as the position of the contacts in the Operating and. During the Peekaboo Mode, the electronic control will allow the machine to nutate at 150 NPM for a maximum of 5 seconds after the washer lid is opened. When the lid is closed, the Start pad must be pressed to continue the cycle. <http://www.ictgeeks.nl/site/data/ws/page/cafetiere-user-manual.xml>

- **kenmore elite calypso dryer manual, calypso dryer manual, whirlpool calypso dryer manual.**

This levels the outer wash plate so that the spin basket spins without an out of balance condition that would be caused by a tilted wash plate. The Drive Motor is linked to the drive mechanisms by a stretch belt. The belt transfers the motion of the Drive Motor to a Drive Pulley. The Drive Pulley has a splined hub, into which the Nutate Shaft is inserted and is in motion in whichever direction the Drive Pulley is turning. The operating pressure switch, marked OPR, controls the amount of water that enters the tub during normal wash and rinse functions. This switch operates in the same manner as similar pressure switches through a pressure switch tube, diaphragm and switch. By being reversible, the motor provides for two separate operations of the washer. Outer Tub The Outer Tub sump plays a role in the drain and water recirculation function The sump area includes two check balls that direct water flow when the water pump operates in the drain and recirc direction. This causes the water pump to draw the water from the tub through the recirculation port, forcing the drain check ball to seal the drain sump port and force the water through the drain hose. Drain Check Ball seals off Drain port, due to positive pump pressure, forcing water out the drain hose. When there is a contradiction, the cycle sheet itself has priority. Nutate is a counterclockwise CCW rotation of the motor. 16. Step Spin. Drive motor ramps up to speed following specific motor profiles. 17. Use this cycle to get 13 to 17 minutes of medium speed wash action and high speed final spin. For maximum soil and stain removal, liquid chlorine bleach must be used. The preset cycle wash time is 15 minutes. Cycle combines high speed wash action and high spin speed. The preset cycle wash time is 19 minutes. Cycle combines medium speed wash action and high speed spin. The preset cycle wash time is 14 minutes. The preset cycle wash time is 16 minutes. <http://www.saimsonline.com/catalog/epq-r-manual.xml>

Cleaning starts with a spray of water and detergent mixture to thoroughly saturate your large load. The preset cycle wash time is 15 minutes. The preset cycle wash time is 14 minutes. Cycle combines extra low speed spray cleaning and wash action to provide gentle care for delicate items such as wool sweaters and silk blouses. Low spin speed helps garments maintain their shape. The preset wash time is 6 minutes. This lasts for about one minute and is followed by a brief period of extra low wash action. Soaking in this washer is different than in a conventional washer. The washer sprays the load with water and detergent for 4 minutes at extra low spin speed followed by a brief period of wash action at the speed of the selected cycle. The time displayed will include an estimate of how long it will take to fill and drain the washer. Fabric softener can be added to the Fabric Softener dispenser. ESD may damage or weaken the electronic control assembly. Both pressure switches are removed in the same manner. 1. Disconnect power from the washing machine. 2. Place the console in the service position. 3. Once this is done, the universal joint assembly can be lifted from the basket. 12. The basket can now be lifted from the tub. NOTE It may be necessary to spread apart one of the drive block sections to loosen the basket from the splines of the spin tube. These should fit together when reassembling the inner wash plate over the universal joint. UJoint Grommets NOTE Do not rotate the inner wash plate when reassembling to the universal joint. Rotating the plate may move the leveler to its tilted position which may cause the grommets to slip. NOTE The two 2 screws at the top of the bracket have ball ends. Fig. 331 Figure 332 shows all the components of the thrust plate assembly. Won't Power Up Open AC cord. Line filter open. Machine control board open. Won't Start Cycle Lid Switch failure. Loose harness connections at control boards. "Start" touchpad failure.

Control Won't Accept Touch Pad failure. Pressure Switch tube off at Pressure Switch or tub pressure dome or kink in tubing. Not draining. Won't Nutate Machine or motor controller connections loose. Drive motor inoperative. Drive belt broken. Drive mechanism failure. Levelling legs not properly installed. Balance ring cracked or loose on basket. Basket drive block loose or im properly installed. Wrong cycle for fabrics being washed. Overloading. Wash water not warm enough to relax wrinkles. Some common causes of "CE". The automatic service diagnostics mode is activated by pressing SOAK SOIL LEVEL SOAK SOIL LEVEL within five 5 seconds while the machine is in Standby Mode. Each function test will time out in three 3 minutes. To enter the manual diagnostic mode 1. Press SOAK CYCLE SIGNAL SOAK CYCLE SIGNAL within five 5 seconds while the machine is in Standby Mode. Press the EXTEND SPIN keypad to run the pump motor in Recirculation. Pressing these keypads a second time turns the pump motor off. NUTATE AND RECIRCULATE TEST This test sequence assumes the control is off. Press EXTRA RINSE again to turn off the pump. The 7segment LED will display "dt". If no AC power is present, replace the power cord. Check for 120VAC on the line filter connection to the machine controller. If no AC power is present, replace line filter. Machine Control Relay Check for 120VAC on the power cord connection to the line filter. Check for resistance values as shown WINDING RESISTANCE Main to FHOT AUX to FHOT MAIN to AUX FTC to FHOT less than .5 short MAIN to Ground. If continuity is good, replace the log valve assembly If the valves and temperature sensor are functioning properly Replace the control board. Operating and Over Fill Pressure Switch Test Check the hose connections between each pressure switch in the console and the pressure dome attached to the tub. Service must be provided by a Whirlpool designated service company.

The washing machine can perform an automatic diagnostics test once manually placed in diagnostic mode to troubleshoot a problem if the washer stops working properly. If the washer won't perform the diagnostic test after you initiate the manual diagnostic mode from the control console board, perhaps you're keying in the request wrong, or the control console board is broken and unable to perform the test. Diagnostic Test Once

initiated, a Calypso washing machine will complete a short automatic test to confirm that the washer's main components are operating correctly. If, during the test, the washer detects a problem with a component or function, it will provide an error code on the control console board's display. It's up to you to decipher the code to identify the problem and take steps to address it. You can find a list of error codes in the washer's Use and Care Guide. Initiating the Diagnostic Test Use the settings on the control console to institute the diagnostic test. While in Standby Mode, meaning that the washer is on but no settings have been selected yet, manually push the buttons for Soak, Soil Level, Soak, and Soil Level in that order within 5 seconds. If you fail to press each button in this exact sequence within 5 seconds, the washer won't perform the diagnostic test, and you'll need to turn off the washer, wait 15 seconds and turn it back on before you can manually enter the sequence again. Performing the Diagnostic Test The Calypso washer should automatically begin the test once prompted.

If the 7segment light on the control console board shows the countdown for the time in seconds that the washer needs to perform the test, then the washer is in diagnostics mode, and an error code will be displayed when the seconds tick down to zero. If the washer hasn't started the countdown, or if it began the countdown but froze without finishing, a control console board malfunction may have occurred that's preventing the washer from completing the diagnostic test. Contact Whirlpool, or Sears, which sells Kenmore Calypso washers, to schedule a service appointment. Deciphering an Error Code Although you may presume that the Calypso washer isn't working correctly after you perform a manual diagnostic test, it may be that you didn't take action to fix the problem after an error code was provided. A manual diagnostic check only reveals a problem with the washer; the washer isn't capable of automatically fixing the problem on its own. Once the console control board displays the error code, you must look it up in the washer's Use and Care Guide and address the problem or contact a repair technician to fix the washer. Her work writing public policy platforms for elected officials nationwide has been featured in national and local newspapers under various client pen names. Gross has a Bachelor of Arts in English and political science, as well as a Master of Public Administration from the University of Delaware. See reviews below to learn more or submit your own review. Order new appliances for your home Shop top brands on Appliances Connection Enjoy reading our tips and recommendations. Its location on this page may change next time you visit. For the first failure I bought and installed a lid latch with no success. I had to call an appliance repairman for the first time in 20 years and he replaced the control board for nearly 400 bucks. It happened again and I replaced the control board for 300 bucks and it worked again for awhile but now its broken down again.

What a piece of garbage this thing is. I refuse to put another dime into repairs and am searching for a different brand of washer. If this is how Whirlpool builds things now, forget it. It gets zero stars from me. Dont walk. run away from Whirlpool. Now, it doesnt spin the water out of the clothes. Have to restart it to get the lid to lock and it shuts off mid wash. Rusting where you put the bleach in at. Piece of junk, wish I never bought it. Wasnt worth the money I paid for it, will just buy a different model next time. I wish I had done my homework first. It is using more water than if it had just done the job in the first place. Will try to return this piece of junk ASAP. When the dryer goes we will never purchase any appliance by Whirlpool or any product associated with Whirlpool. Had to have the sensor replaced and the Thermal fuse because the dryer would not get hot to dry the wet clothes. The baffles need to be cleaned for a third time full of lint. The washer was a joke white clothes came out dingy with grease marks, brown stains, lint deposits and bleach streaks when no bleach was added to wash. Besides having to replace the motor and pump, we threw out blouses, sheets, bed covers, underclothing and pants due to the stains that we could not remove. Whirlpool offered no real help. To reiterate NEVER again will we buy any appliance by or associated with WHIRLPOOL. This Calypso duo is nothing but junk, cheaply made and horrible washing performance. I found out that you could not order a replacement part for just the pump. To replace

the pump you would now have to replace the motor along with it. I went online to seek the part I needed. I also checked with local suppliers. Everyone had the pump in stock, so they said, but when I ordered it and waited, several weeks, and with several different suppliers or parts, each time I was told the part was discontinued and not available.

When I went to a new parts supplier who advertised the parts availability, I went through the same process. Pretty frustrating for a someone who needs to get her familys clothes clean. I also feel that the washing machine did really not hold up as long as I thought it should. I think it is not more than 10 years old, maybe only 7 or 8 years old. Not good enough for me, especially when we had just replaced brake and drive tube parts 2 years ago for over 150.00. It still isnt working. I have been without a washer since June 16th. Ive called Lowes and Whirlpool and they just keep giving me the runaround. Very dissatisfied with both companies. Almost 3 months old, the motor needs to be replaced, the motor overheats. Whirlpool is selling defective appliances again as they had in the past. They have the worst customer service I had ever dealt with. I am looking for recall information regarding this very poor quality gas dryer being sold for top Dollar. Consumer should be alerted to steer clear of any Whirlpool appliances. The set was maybe a year or two old. We didnt seem to have any problems with the set except for sometimes finding oily spots and streaks on our clothing. I initially attributed that to stuff left in pockets or in the machine by accident, but it started happening too frequently. The kicker was when the washing machine just stopped working during a cycle. It would display LD and water would just sit in the bottom of the drum and under the drum. My husband took it apart, and thats where we nearly lost it. The inside of the machine was filled with black gunk, moldy grossness that freaked us out. OMG wed been wearing that stuff in our clothing and breathing it. Needless to say, it is being disposed of as I write. I cannot believe that a company as recognizable as Whirlpool does this and apparently knowingly from what Ive read. Not sure what we can do at this point. But were replacing the washer and staying as far away from Whirlpool as possible.

We had a terrible experience with a brand new microwave that was 18 months old and broke down completely. We replaced that with another brand too. The moral of the story is that Whirlpool is a negligent, very poor manufacturer of household products and should be avoided. I house sat for family that had purchased a GE dryer shortly before I got mine. I had forgot that it didnt have to be torture to wash and dry clothes. This Dryer has ALWAYS bumped and banged after leveling several times. The complaint is, it cuts itself off before the clothes are dry!!!! It will NOT turn back on till its ready. This causes dark clothes to have a chance to start to smell musty. Ive changed the setting several times and no change. This machine is very time consuming and I have no idea why a dryer would be designed to turn off while clothes are still damp. My familys GE dryer didnt do that. It dried the clothes wonderfully. My washer and dryer are so poorly designed that I will not gamble on another Whirlpool product. This issue has nothing to do with where I purchased it. I am not willing to pay for a tech to tell me its just the design. I already know that. I installed the pump myself and the washer has run great ever since. The washer does leak from around the top of the tub if it gets off balance or I wash something large like a comforter or a large load of laundry but it is nothing serious. I just need to replace the gasket around the top. I am hoping these last because I do like them and I think they do a great job washing the clothes. They were less than 6 mos.old. I have NEVER EXPERIENCED such a useless set of machines in ALL my life. My white clothes I could get cleaner by beating them on a rock and the dryer I have to dry my clothes at least 3 or 4 times per load. I will NEVER purchase another Kenmore product EVER. So, I called back to Whirlpool customer service and told what had happened and I NEED the dryer to be fixed today or if not over the weekend.

At that time I asked to be transferred to a supervisor and was. Rick was not helpful either. He told me Whirlpool was not able to make compensation for errors on their part. He was very apologetic

but not very sympathetic. My frustration is my dryer failing to work after only 6 years ! and then the company from whom I purchased it was unable to satisfactorily arrange a simple service call. My wife and I would still pay for parts and services but were looking for some assistance for the fees associated with your companys mistake and the inconvenience to our work schedule and the requirement that we would further have to arrange our schedule an additional time for an error on your companys part. Why should we feel any confidence in buying future Whirlpool products let alone recommend them to anyone. It seems that the opportunity to do the right thing by the customer failed. I hope that your company will attempt to make amends and leave CUSTOMERS pleasantly surprised. While the tech was here on the last service call he put his cell phone down close to the washer so the tech could hear the popping noise. I have now learned that this model has been discontinued. We have never had any issues with it at all. Never had to have it serviced. Barely even did any maintenance on it whatsoever except to occasionally, maybe once or twice a year, adding one of the store bought HE washing machine cleaners. Never damaged any of our clothes. We have three small children and a cat. Have washed everything under the sun including silky delicates, small area rugs, memory foam bathroom mats, waterproof mattress covers, and even queen sized quilts and comforters. We absolutely love these machines and would recommend them to everyone! Then came the dryer problems about a year later, started shutting itself off midcycle, then eventually refused to start. Tried to save some money by buying and installing another new board myself but that didnt fix it.

Now in the last week, the washer pump is screaming like it is ready to blow up, but after reading all these complaints and recognizing some of the wash quality problems Ive been living with, Ive decided to replace the washer rather than fix it. This machine boasts of being a high efficiency machine but I have yet to discover that. I am also not impressed with the capacity load. I thought I could get more clothes in the tub since there is no agitator but not so. The one thing I do like about the machine is the spin cycle which practically takes all the water out of the clothes thus causing less drying time. I have no problem with the dryer only the washer. I am not happy about this at all. The customer agent seemed very helpful and without ANY questions asked, offer to send someone over. She said that if the problem was a dryer issue, it will be covered by the warranty. The technician apparently cannot fix anything unless it is LITERALLY INSIDE the dryer. They dont bring any other tools or have no other skills, even though dryer vent issues are the most common cause of dryer problems. Calling back Whirlpool, they refused to discuss the issue. If the agent added any other information, they were doing you a favor. All our job involves is SCHEDULING the appointment. We can log on your file that you are unhappy, but we wont do anything else. Worst is that they disguise themselves as a more intelligent service that a customer expects and uses their call center as a revenue lead generation center for their technicians. No wonder they were so happy to send out a technician WITHOUT any questions asked. I am trying to engage Whirlpool in an intelligent conversation, but Whirlpool has refused to continue any discussions. First we should know that it takes water to wash something. This machine has destroyed my towels and rugs. First I thought it was the towels, but I have bought all priced towels and it is not the towels. It is the machine.

I called the company and asked if there were any complaints on the washer. Of course they said no. I told them that it needed to be recalled. My washer is not very old, but I am ready to buy another machine. I have friends that work for the company and they have told me to call, call, call until they do something. I should not have to do that. I would like for them to see my towels. And maybe the next day it will work. The dryer takes twice as long as my ancient dryer. I have called a few times. I am not willing to pay to have them fix their crummy machines, so I will be buying a new set. Since I have pets, this is a particular problem. I replaced the pump multiple times myself, then I started fishing out the hair with a coat hanger. When the pump was redesigned, I replaced the whole pump assembly. That worked well but after that, the motor control board would fail. It seems the redesign

was not made for the old control board. They should have redesigned the control board too. This washer has been nothing but a money pit. I had an old Maytag that failed after 20 and some years, but this washer didnt last 2 before the first repair and it cost a whole lot more than the Maytag. I have a Maytag wringer washer that is still working. The simpler, the better. This machine has NEVER washed clothes clean. I paid for a 3year warranty, and used it multiple times. Also, I called Whirlpool multiple times to complain about the cleanliness of the clothes and they did nothing. Best yet, when your clothes turn grey and dingy, the manufacturer tells you to use either more or less soap. NEVER PURCHASE THIS MACHINE; it is PURE JUNK. I did not buy a service contract because at the time money was tight. The repairman advised me to call Whirlpool because this should not have happened after only two years. I called Whirlpool's customer service and was told that since I did not buy a service contract, there was nothing they could do. She would not let me talk to anyone over her or in charge.

I dont have the money to buy a new washer. The reason Whirlpool has such a callous and uncaring attitude toward their customers is because they have a monopoly on clothes washers. Whirlpool owns Maytag, Hotpoint, and just about every other washer manufacturer except General Electric. Whirlpool couldnt care less about their customers satisfaction with their product. Is there anyone investigating this monopoly It was serviced until it was not serviceable anymore.in 2006! Thankfully, I purchased a service contract so I was still covered. It took three weeks, but the store replaced my machine with an identical one. If I knew about the recall or the class action suit, I wouldnt have accepted it, but rather traded up to a better model. Now, in 2012, it finally broke beyond worth fixing. Supposedly, from what I see online, this machine was only made in 20002001. Yet, I bought it in 2003 and it was replaced in 2006. The store swears it was new and not part of the recall. I tend to believe the internet, sadly, and found a statement about production years. But I cant find any info about the recall or the lawsuit. Anyone has a link I could use Thanks. It breaks down every 6 months or so, which is a big problem with a large family. I have been trying to save money by repairing it time and time again. I could have saved money and aggravation. I am so angry and frustrated. I chatted with a Whirlpool rep. I explained to her the repetitive problems and stated that I refused to pay another repair bill. This washer was recalled, but I had not known about the recall. The company could not help me with this situation, and they were very sorry. Well, thats not good enough. My clothes are frequently musty smelling. I thought it was the detergent I was using. Now, reading all of the similar complaints helps me understand the washer has many flaws. I personally will never ever purchase anything from Whirlpool again, and I see Im not the only one who feels this way.

When my washer broke recently, I had a repairman come to the house. When he took the machine apart, I was shocked to see the buildup of gray and black slime that was on the reverse side of the basket and pretty much everywhere on the unseen parts of the machine. These parts were where the water would touch them and on my clothes. Were my items ever clean. The towels that touched my face Over the last 2 weeks, we have noticed that on 3 different occasions, the dryer has been very hot, long after the cycle is complete, even 3 days later. I suspect the coil is being generated somehow. There is also a lot of humidity. When I reached over the dryer to pull the plug, I received a shock. I want a technician to come to my house and repair it. I am a vendor at the Whirlpool Clyde division in Clyde, Ohio. They gave me a service date. On the day of service, a contractor was trying to get in contact with me. Apparently, the initial customer service representative for Whirlpool wrote down a fake number on my service request for my main number and wrote down my actual cell number as the alternate. The contractor called me and left a message stating that since I did not answer my phone, they were going to have to reschedule my appointment. My issue is that Whirlpool's representative never took responsibility for the mishap. Instead, they said that there was nothing that they could do to rectify the situation. I have already had the control panel changed once and now it seems as though it needs to be changed again. This is ridiculous. Im wondering if Im going to have to change this every so many years. If you Google Whirlpool washers, there are

numerous complaints about this product and the same errors. I first thought they were the result of something left in my pockets, perhaps a pen. But the gray staining especially on light colors became more frequent and I realized that the washer was at fault.

It was fixed by a Sears tech who explained that oil from the motor was seeping into the washtub in June of 2007 all charges waived because the parts replaced fell under the fiveyear warranty on drive system parts. Two weeks ago, less than five years from the last repair, it started again, oil stained clothes. I took the ruined clothes to the Sears store. The manager, Donna, phoned the repair dept. Another repair was scheduled for the next day. I refused and started on what has become the incredibly difficult task of making Sears stand behind their product and repairs. I even wrote a registered letter to the CEO Lou D'Ambrosio who never responded. I finally found out from a Sears rep that the Calypso had so many problems, it was discontinued. I am still trying to get them to take responsibility to again repair this flawed washer. I was careless in not checking the reviews before buying, thinking that this company was very serious and honest in their dealings with their clients, but after three calls I was proven wrong. I end up buying another washer and I advise anyone who read this not to ever buy a Whirlpool appliance.
