Including refile ink bottles. R500. 082 579 6404. The enhanced capability to handle a variety of print jobs contributes to expansion of

new services and business opportunities. In addition to sample package printing, print service variations are expanded to include tags, DM, stand menus and sales promotion tools. As well, of course, as fullbleed A3 size printing with registration marks, the system is also capable of duplex A4 printing with registration marks. In addition to the airassist function that blows air from the sides and front to separate sheets, the sheet is adsorbed onto the suction belt for reliable conveyance. Optimised air control matched to the paper type realises stable feeding of thick paper that causes a higher conveying load, offsetprinted sheets and coated sheets.

<http://stroynerud-sm.ru/wp-content/plugins/formcraft/file-upload/server/content/files/1626edbeadb841---bosch-pdo-multi-manual.pdf>

In addition, inexpensive, centerglued universal envelopes can be used thanks to less difference in glossiness on the overlapped area, contributing to a reduction of overall printing cost as well. With this capability, it is now possible to print A4 or letter size 6up on the sheet, making it possible to provide unique print materials for catalogues, pamphlets and sales promotion tools, as well as impressive posters. Flexible handling of various jobs is made possible. Colour fluctuation is controlled within the minimum under various condition, which ensures stable and beautiful finish for the first through to the last prints. High image quality that brings higher value of printed material generates advantages for the print services. In addition, it requires only a small amount of heat for fusing, significantly reducing power consumption. Simple settings and userfriendly search functions contribute to easy setup and efficient production. The mechanism also automatically corrects paperfeeding misalignment in the main unit tray, contributing to both improved quality and higher productivity. Adjustments are performed using the paper actually used to enable accurate gradation adjustment matched to paper characteristics. A mode that measures secondary colour RGB and tertiary colour tricolour gray in addition to CMYK as target colours has been added to further enhance accuracy. The longer developer life also minimises downtime. Since there is no need for measurement or numerical input, as in the past, high quality print products are constantly available with fewer manual settings and less human errors. In addition, high quality is maintained thanks to realtime monitoring and adjustments during printing, contributing not only to cost reduction with less waste but also to improve customer trust. There is no need for measurement or numerical input, as in the past.

The IQ501 provides high quality print products with skillless operation thanks to an environment that does away with quality problems caused by measurement or input errors. In addition, hybrid colourimetry using a Konica Minolta's reputable spectrophotometer enables highly accurate colour correction. Items for the packaged adjustment are selectable. Performing adjustments required for daily operation in one step allows highly precise adjustments to be completed in a short time without bothering the operator. Colour profiles that need to be created for each paper type are now automatically created without requiring special skills. In addition, the IQ501 is equipped with a function to verify the colour setting of the created profile. As a result, colour fluctuations and registration misalignment are controlled to a minimum, which helps provide high quality print products in a stable manner. Stable results are ensured in printing of company logos for which the colour stability is essential, and cards, page numbers of booklet and ruled lines for which accurate positioning is essential. In addition, print waste caused by instable colour and registration is minimised, contributing not only to cost reduction but also to improve customer trust. In addition, thanks to an overall increase in production time purely for printing including adoption of a high speed dual colour scanner and decrease in adjustment time using Intelligent Quality Optimiser, contribution to high volume print jobs and shorter turnaround is enhanced. In addition, the addition of a doublefeed detector on the machine allows efficient work with fewer errors. An efficient print work is realised even in a highvolume printing by reducing the time and effort for paper replenishment. Finished documents can be taken out with the cart as they are for ease of transport

to the next process. Abundant paper stack capacity helps improve the efficiency in the offline workflow where postprocessing is a main work.

Curl can be adjusted very precisely in 20 steps. This provides flat surface prints without interrupting print operation, and reduces the workload and waste in postprocessing. The humidifying function cools down the sheet that was heated in the fusing unit, and provides moisture lost from the sheet back to reduce the stiffness for effective curl adjustment. This not only corrects the curl but also provide an expectation for removal of static electricity, which substantially contributes to the work efficiency in offline post processing. The replenishing water for the humidifier is easily supplied from upper part of the RU518 during printing. Highquality postprocessing meeting professional specifications is efficiently achieved with superb operability, which generates substantial advantages for cost and turnaround in the fullscale inhouse production. If necessary, the system can be expanded to include functions for tasks such as punching and cover sheet insertion. Three suboptions can be mounted to expand the system to enable saddlestitching, postinsertion and punching, making it possible to perform multiple operations in a small space. Cardstock up to 216 gsm can be used for the cover to realise highquality bookbinding through advanced paper alignment. This enables flexible bookbinding work owing to the ability to insert A3 size drawing sheets in booklets such as reports and manuals. Furnished with features useful for producing DMs such as a wide variety of folding functions, and 2 and 3hole punching functions, as well as a sheetinserter function capable of setting two different insert sheets. Realisation of optimum workflow using various solution applications in addition to the linkage with AccurioPro Solutions and office machines enables to structure an advanced printing environment that leads to laboursaving. Tone curves can be also adjusted in a similar manner to that of Color Centro.

In addition, connecting a USB mouse provides an operational environment similar to a PC. Work, editing, setting and other tasks relating to colours matched to the main body can be performed, such as colour adjustment, creation of colour profiles and simulations. These functions are also available for RIP files. An easytouse interface having a high degree of affinity with the main body panel and printer driver supports more efficient operation. In addition, Color Centro also can be started up from this screen, enabling seamless management performance. The hotfolder utility contributes to reduction of manpower required for job registration as well as of processes need to be performed by the operator. With a wide range of colour profiles, flexible colour management is made possible. In addition, a function is also available to automatically print only the monochrome pages of the document on a low cost monochrome printer, contributing to a reduction in overall print cost. In addition, incorporated OpenAPI ver. 4.7 allows utilisation of solution applications including authentication, charging and ubiquitous printing, etc. A leadfree shaft is also adopted to protect the environment as well as the user's health. Thank you to give us your email, we will send you your password by email Please give us your mail to initialize your password La vente daccessoires nest pas Disponible en ligne pour la. Veuillez vous adresser a nos Revendeurs en en cliquant ICI It should be steady and robust so that you can place the ironing appliance on it. The board should be perforated to allow the steam to pass through the fibres of the fabric to soften it and make ironing easier. The ironing board cover should also be suitable to allow the flow of steam through. How do I use it As the steam produced is very hot, it softens the fibres and removes creases. Note Never use the vertical steam function on an item being worn by anyone.

We would advise ironing dark clothes inside out and using the correct temperature. If ironing mixedfibre fabrics, set the temperature for the most fragile fibre. Important The iron takes longer to cool down than to heat up. We recommend that you start with fabrics to be ironed at a low temperature. We advise you to use steam occasionally when the temperature is set low on the iron, otherwise drops of water could appear on your laundry. Warning The use of iron cleaner will cause damage to your soleplates autoclean coating. Do not use any detergents or descaling products to

clean the soleplate or base unit. Remove the scale collector by lifting and rotating the flap a quarter turn. Some waterdrops could appeared underneath the ironing board and fall on the flooring. Ensure that you have rinsed your clothes thoroughly in order to to remove soap deposits or chemicals from new garments which could stick to the iron. Please clean the Irons surface. There is nothing wrong with it. If it still does not work, do not try to dismantle or repair the appliance yourself and take it to an approved repair centre. To avoid any danger, have it replaced by an approved repair centre. The use of steam triggers the functioning of an electric pump. The water flow allows the cleaning of the soleplate interior. The selfcleaning operation causes the electric pump to operate. However, if you notice that the cable is damaged, have it repaired by an approved repair centre. Its active coating eliminates fibres and impurities that often become stuck to the plate and end up reducing its glide. Leave it at a local civic waste collection point. It should be steady and robust so that you can place the ironing appliance on it.
